Meeting the Demands of Business Agility with Metavine

Our client provides cloud and virtualization software and services to empower organizations to remain innovative and competitive by streamlining IT operations. Working with Metavine, our client was able to build a simple application that normally would take over a month, in less than two days. Enabling developers to address the application requirements, rather than focus on the technology, resulting in increased speed of delivery for those applications.

Revolutionary Development Capabilities to Create True Business Agility

Delivering applications at a rate necessary in today's hyper-competitive world

OBJECTIVES

- Transform businesses to ensure sustainable innovation
- Reduce the time from concept to realization
- Reduce dependency on overburdened development resources
- Establish a future state best practice for program and project implementation

BENEFITS

- Optimization of application development, allowing increased opportunities for innovation without increasing costs
- Leverage a wider range of skills
- Ability to deliver more business desired projects, in less time, at a 200% cost reduction

WHY METAVINE

- Rapid time to market to meet operational needs
- Leading-edge innovation, technology, and consulting
- 7-9 times more productive than conventional models
- Expert guidance on best practices for solutions implementation

FUTURE PLANS

- Leverage increasing number of business analyst to implement solutions
- Continually examine projects and portfolio to ensure maximum return on investment
